GEAR REPLACEMENT

Since the introduction of the 'new ratio' gearbox at Tractor Serial No.957E-63953 (August 1960), certain of the old ratio gears are being progressively discontinued in service as existing stocks are exhausted.

The chart which appears below will identify and indicate to dealers the additional meshing gears required when replacing and old ratio gear by the corresponding gear of the new ratio.

When replacing and old ratio gear, the new ratio gears in the same group (i.e. I, II, III or IV) must be supplied. For any additional changes or re-work necessary refer to Tactor Service Letter No.4, 1962 series.
